OUR BUSINESS

A focused supply partner.

MSF INTERNATIONAL MINING is a South African mining supply business founded in March 2019.

We source equipment, critical spares, hydraulics, OTR tyres, vehicles and power solutions against the requirement your operation needs to solve.

From a single hard-to-find component to a multi-item procurement package, our starting point is the specification, quantity, destination and required date. Those details guide the supply options we assess and the offer we put in front of you.

01 / PROCUREMENT

Clarity before commitment.

Product identity, condition, availability and commercial responsibilities are established for the specific offer. Proposed alternatives are identified for buyer approval.

02 / SOURCING

Reach matched to the need.

We consider South African and international suppliers for requirements across African mining markets. The sourcing and delivery route is assessed for each enquiry.

WHY BUYERS WORK WITH MSF

A direct commercial contact. A broad supply scope. A practical focus on the next procurement decision.

MSF INTERNATIONAL MINING (Pty) Ltd is part of GlobaTec Group Holdings.

FOUNDER & CEO

Matthew Fourie.

A direct conversation about the item, the supply route and the decision in front of you.

Founder-led supply.

Matthew founded MSF in 2019 and leads its sourcing conversations, bringing 19 years of mining industry experience.

He works with buyers to define the technical requirement, assess sourcing options and understand the urgency behind each enquiry.

From the first request through quotation and order coordination, Matthew remains the direct commercial contact within the agreed supply scope.

Supplier stock, lead times and technical claims are checked for the specific offer. Where a supplier, specialist or transport provider is involved, their role is agreed for the transaction.

CAPABILITIES

Equip the whole operation.

One supply conversation across six practical categories.

01

OTR tyres & components

OTR tyres, tubes, flaps and tyre components for mining and earthmoving applications.

02

Critical spares

OEM and aftermarket hydraulics, mechanical components, electrical parts and wear parts.

03

Equipment & machinery

Excavators, loaders, mining trucks and yellow machinery, sourced to the required application.

04

Vehicles & site support

Utility vehicles, ambulances, fire trucks, fuel and water bowzers, with the required configuration defined.

05

Solar & power

Solar equipment, generators, backup power and associated equipment, assessed against the load and scope.

06

Project procurement

Strategic sourcing, procurement coordination and project-management support within an agreed scope.

WORKING WITH MSF

A clear route to an offer.

Enough detail to make a useful decision, with responsibilities agreed before supply proceeds.

01 Define the requirement

Confirm part numbers, machine details, approved specifications, quantities, destination and the date that matters.

02 Assess supply options

Review suitable suppliers and available routes against compatibility, condition, urgency and buyer requirements.

03 Clarify the commercial offer

Set out the offered scope, price, availability, lead time and applicable warranty, payment and delivery terms.

04 Coordinate the agreed order

Proceed against the accepted offer and order requirements, with supplier and transport responsibilities clearly allocated.

Supplier onboarding: send your checklist and procurement contact so MSF can work within your process.

RAPIDSOURCE

Support beyond one RFQ.

A coordinated programme for urgent supply, planned procurement and supply continuity.

RapidSource brings sourcing support into one defined engagement. It can cover recurring requirements, critical breakdown items, tyres, project procurement and continuity planning across the agreed categories.

01

Strategic sourcing

Supplier identification, RFQ support, benchmarking and alternatives across operational and CAPEX requirements.

02

Breakdown response

Urgent sourcing support for critical parts and equipment, with a response target agreed for the engagement.

03

Tyre continuity

OTR and fleet tyre sourcing, replacement requirements, alternative supply options and replenishment planning.

04

Continuity planning

Identify critical supply risks, consider contingency options and prioritise future procurement needs.

SOURCE / SECURE / SUSTAIN

Scope, response commitments and fees are agreed in a written proposal.

SEND A REQUIREMENT

Start with the item. Build from there.

Send the specification or RFQ document. We will assess the requirement and the next sourcing step.
